Safety Precautions

Before getting started, please read the following important safety precautions.

- 1. The **rBOX101-FL** does not come equipped with an operating system. An operating system must be loaded first before installing any software into the computer.
- 2. Be sure to ground yourself to prevent static charge when installing the internal components. Use a grounding wrist strap and place all electronic components in any staticshielded devices. Most electronic components are sensitive to static electrical charge.
- Disconnect the power cord from the rBOX101-FL before making any installation. Be sure both the system and the external devices are turned OFF. Sudden surge of power could ruin sensitive components. Make sure the rBOX101-FL is properly grounded.
- 4. Make sure the voltage of the power source is correct before connecting the equipment to the power outlet.
- 5. Turn OFF the system power before cleaning. Clean the system using a cloth only. Do not spray any liquid cleaner directly onto the screen.
- 6. Do not leave this equipment in an uncontrolled environment where the storage temperature is below -45 or above 85. It may damage the equipment.
- 7. Do not open the system's back cover. If opening the cover for maintenance is a must, only a trained technician is allowed to do so. Integrated circuits on computer boards are sensitive to static electricity. To avoid damaging chips from electrostatic discharge, observe the following precautions:
 - Before handling a board or integrated circuit, touch an unpainted portion of the system unit chassis for a few seconds. This will help to discharge any static electricity on your body.
 - When handling boards and components, wear a wristgrounding strap, available from most electronic component stores.

Classification

- 1. Degree of production against electric shock: not classified
- 2. Degree of protection against the ingress of water: IP30
- 3. Equipment not suitable for use in the presence of a flammable anesthetic mixture with air or with oxygen or nitrous oxide.
- 4. Mode of operation: Continuous
- 5. Type of protection against electric shock: Class I equipment

General Cleaning Tips

You may need the following precautions before you begin to clean the computer. When you clean any single part or component for the computer, please read and understand the details below fully.

When you need to clean the device, please rub it with a piece of dry cloth.

- 1. Be cautious of the tiny removable components when you use a vacuum cleaner to absorb the dirt on the floor.
- 2. Turn the system off before you start to clean up the component or computer.
- 3. Never drop the components inside the computer or get circuit board damp or wet.
- 4. Be cautious of all kinds of cleaning solvents or chemicals when you use it for the sake of cleaning. Some individuals may be allergic to the ingredients.
- 5. Try not to put any food, drink or cigarette around the computer.

Cleaning Tools:

Although many companies have created products to help improve the process of cleaning your computer and peripherals users can also use household items to clean their computers and peripherals. Below is a listing of items you may need or want to use while cleaning your computer or computer peripherals.

Keep in mind that some components in your computer may only be able to be cleaned using a product designed for cleaning that component, if this is the case it will be mentioned in the cleaning.

• Cloth: A piece of cloth is the best tool to use when rubbing up a component. Although paper towels or tissues can be used

on most hardware as well, we still recommend you to rub it with a piece of cloth.

- Water or rubbing alcohol: You may moisten a piece of cloth a bit with some water or rubbing alcohol and rub it on the computer. Unknown solvents may be harmful to the plastics parts.
- Vacuum cleaner: Absorb the dust, dirt, hair, cigarette particles, and other particles out of a computer can be one of the best methods of cleaning a computer. Over time these items can restrict the airflow in a computer and cause circuitry to corrode.
- Cotton swabs: Cotton swaps moistened with rubbing alcohol or water are excellent tools for wiping hard to reach areas in your keyboard, mouse, and other locations.
- Foam swabs: Whenever possible it is better to use lint free swabs such as foam swabs.

Note We strongly recommended that you should shut down the system before you start to clean any single components.

Please follow the steps below:

- 1. Close all application programs
- 2. Close operating software
- 3. Turn off power switch
- 4. Remove all device
- 5. Pull out power cable

Scrap Computer Recycling

If the computer equipments need the maintenance or are beyond repair, we strongly recommended that you should inform your AXIOMTEK distributor as soon as possible for the suitable solution. For the computers that are no longer useful or no longer working well, please contact your AXIOMTEK distributor for recycling and we will make the proper arrangement.

CHAPTER 1 INTRODUCTION

This chapter contains general information and detailed specifications of the **rBOX101-FL**. The Chapter 1 includes the following sections:

- General Description
- System Specification
- Dimensions
- I/O Outlets
- Package List

1.1 General Description

The **rBOX101-FL** Din-rail fanless embedded systems are suitable for communications control and for protocol converter applications in critical environments. Built for rugged work environments, the **rBOX101-FL** series features an extra low power consumption Intel[®] ATOMTM Z510PT (1.1 GHz) or Z520PT (1.33 GHz) processors supporting industrial temperature range of -40 to +70. Their front accessible I/O cabling is very convenient for wiring and maintenance. The **rBOX101-FL** series offers a VGA output, making it particularly well-suited for communication control, SCADA and industrial automation. Its compact size with Din-rail mounting allows for easy installation into control cabinet. Pre-installed with Linux, Windows[®] CE 6.0. Windows[®] 7 embedded or Windows[®] XP embedded, the **rBOX101-FL** series provides programmers with a friendly environment for developing application software at a lower cost.

The **rBOX101-FL** is robust industrial-grade hardware design and adopts the advanced cooling system, besides, supporting the CompactFlashTM, which makes it especially suitable for field control & monitoring system solution for following markets:

Utility Industries (Water; Energy; Chemical Plant; Mining...) Public Transportation Industries (Traffic/ Highway

rBOX101-FL Series User's Manual

Control; Train/Bus Control ...) Homeland Security (Weather Monitoring/Alarm System ...)

> Features

- 1. Fanless and no internal cabling design
- 2. Wide temperature operation of -40 +70
- 3. 1 isolated DIO (4 IN/OUT) for rBOX101-6COM
- 4. Supports 2 Ethernets with Magnetic Isolation Protection
- 5. 2 Watchdog Timers
- LED Indicators (Power, Alarm, Ready/Active, COM (TXD,RXD))
- 7. Wireless (Optional by ODM order)
- 8. SNMP V1/V2c
- 9. Support one CompactFlash™
- 10. 2 power paths with terminal block and 12–48VDC
- 11. Din-rail mounting
- 12. Wall mounting (optional)
- 13. Meet safety agency requirements (UL508, UL60950) & passed heavy industrial EMI/EMS testing (ex: EN61000-6-4, EN61000-6-2...)

> Embedded O.S. Supported

The **rBOX101-FL** not only supports Windows[®] XP, but also supports embedded OS, such as Windows[®] XP embedded, Windows[®] 7 embedded, Windows[®] CE 6.0 and Linux. For storage device, the **rBOX101-FL** supports one type II CompactFlashTM slot.

1.2 System Specifications

1.2.1 CPU

Onboard Intel[®] ATOM[™] Z510PT (1.1 GHz) or Z520PT (1.33 GHz) processors with FSB 400/533MHz.

1.2.2 Chipset

Intel System Controller Hub US15WPT

1.2.3 BIOS

Phoenix AwardBIOS

1.2.4 System Memory

 One 200-pin SO-DIMM support DDR2 400/533MHz max. up to 2GB

1.2.5 Graphics Chip

- Intel GMA500 graphics Core integrate in US15W PT
- DB15 VGA port

1.2.6 Video Memory

• Share Memory max. up to 256MB.

1.2.7 LAN

■ LAN 1 :

. GBE Intel 82574, 10/100/1000Mbps LAN w/ Magnetic Isolation Protection $1.5 \mathrm{KV}$

. LED definition: Active LED (Yellow flashing), 10 LAN LED (NO Light), 100 LAN LED (Green Light), 1000 LAN LED (Orange Light)

■ LAN 2 :

. FE Davicom DM9102HI, 10/100Mbps LAN w/ Magnetic Isolation Protection 1.5KV

. LED definition: Active LED (Yellow flashing), 10 LAN LED (NO Light), 100 LAN LED (Green Light)

1.2.8 Storage

• 1 x CompactFlash Typell

1.2.9 USB

- 2 x USB2.0
- With power distribution control and over current protection

1.2.10 COM

- 2 ports DB9 Pin Define RS-232/422/485
- ESD Protection 15KV
- Magnetic Isolation Protection 2KV
- The interface select by software or BIOS.
- It also supports Auto Flow Control in RS485 mode
- COM1,COM2 speed up to 115.2kbps
- COM3-COM4 Serial Port Speed up to 921.6kbps (rBOX101-4COM)

COM3-COM6 Serial Port Speed up to 921.6kbps (rBOX101-6COM)

1.2.11 Power

- 2 power paths
- 2 power sources must be same voltage and DC input range 12-48V.
- Main power source is for Input Power Path 1, Backup power source is for Input Power Path 2.
- Only one power source must be for Input Power Path 1.
- DC Input has UVP/OVP/Reverse protection.
- Reset Button without Power Switch

NOTE If 2 power sources aren't same voltage and the system will be possible damage.

When the system is shoutdown after, if users press the Reset Button for 3 seconds and the system will be restarted.

1.2.12 Watch Dog Timer (WDT)

- 2 WDT
- WDT 1 : one step is 1sec, 255 levels
 WDT 2 : one step is 250ms, 255 levels

1.2.13 Digital I/O Connector and Pin Definition

- 4bit DI and 4bit DO
- DI:

Input range : 0~24 VDC Logic level 0 : +/- 3V max. Logic level 1 : +/- 5V min. (DI to COM-) 3KV optical isolation Support Dry Contact or Wet Contact

■ DO :

Max. 200 mA per channel, current sink type 24VDC nominal, open collector to 30V 3KV optical isolation

DIO 4 in/out of TB10 Female

TB10 Pin No .	Signal name	Meaning
1	XCOM+	Plus Common for DIO
2	DI0	
3	DI1	
4	DI2	
5	DI3	
6	DO0	
7	DO1	
8	DO2	
9	DO3	
10	XCOM-	Minus Common for DIO

Introduction

DIO Control

Jumper	DI & DO State	Operation
1-2 (Default) DRY	DI to COM -	Internal power 5V for DI, DI to COM-, Photocoupler is active low
1-2 (Default) WET	DI to COM -	External power 0~24V, DI to COM-, Photocoupler is active low
2-3 WET	External power 0~24V to DI	Each DI port connector to independent external power input 0~24V, Photocoupler is active low
	COM+ to DO	Load connector Do port to COM+ Logic level 1 : LAOD is enable Logic level 0 : LOAD is disable

Introduction

rBOX101-FL Series User's Manual

Reference 2.

Reference 3

Reference 4

rBOX101-FL Series User's Manual

1.2.14 System LED

For maintenance issue, IO board will have below LED.

- 1. DC PWR1 : Green

- DC PWR1: Green
 DC PWR2: Green
 Alarm : Red
 OS Ready: Yellow
 COM TX1 : Green
 COM RX1 : Green

- COM TX2 : Green
 COM RX2 : Green

LED Name	Description	Color	Note
DC PWR1	Indicate the DC1 input status. When the DC input is acceptable, the LED will ON.	Green	
DC PWR2	Indicate the DC2 input status. When the DC input is acceptable, the LED will ON.	Green	
Alarm	 The LED will ON if having below condition. 1. DC PWR1 or PWR2 is lost. (default) 2. User define event.(option) The behavior of Alarm and Relay are the same. When the LED of Alarm is ON and the Relay will be turn on at the same time. 	Red	
RDY/ACT	The LED for RDY/ACT can help users to judge BIOS finish or not and the OS can normal work or not. When the BIOS finish the configuration of system, the LED will ON. After this the LED will flash when the storage is accessed. - The LED will flash when the storage is accessed.	Yellow	

	 The LED always ON without any flash for a long time, the OS is possible crashed. The LED isn't ON for a long time, it means the system is on shutdown status. 		
COM TX1	When COM1 transmit data the LED will on.	Green	
COM RX1	When COM1 receive data the LED will on.	Green	
COM TX2	When COM2 transmit data the LED will on.	Green	
COM RX2	When COM2 receive data the LED will on.	Green	

When the system is shoutdown after, if users press the **Reset Button** for **3 seconds** and the system will be restarded.

Below pictures are the LED example:

1.2.15 Alarm Contact

- 1 relay output
- Relay output with 0.5A @ 30VDC
- Event : Power Fail and User define

1.2.16 Wireless (Optional by ODM order)

- 1 x Mini Card (Support USB only)
- 1 x SIM Socket on board

1.2.17 Reset Bottom

1 x Reset bottom

When the system is shoutdown after, if users press the Reset Button for 3 seconds and the system will be restarted.

1.2.18 Operation Temperature

■ -40 ~ +70 (-40 °F ~ +158°F), with W.T. (Memory & CF)

1.2.19 Storage Temperature

■ -45 ~ +85 (-49 °F ~ +185°F)

1.2.20 Humidity

■ 5% ~ 95% (non-condensation)

1.2.21 Weight

1.38 kg (3 lb) for rBOX101-4COM

1.2.22 Dimensions

- 81mm(3.18") (W) x110mm(4.33") (D) x135mm(5.31") (H) for rBOX101-4COM
- 100.6mm(3.18") (W) x110mm(4.33") (D) x135mm(5.31") (H) for rBOX101-6COM

1.2.23 System I/O Outlet

- 6 (or 4) 9-pin D-Sub male connectors, COM1~COM6 (rBOX101-6COM) or COM1~COM4 (rBOX101-4COM) for RS-232/422/485
- One 15-pin D-Sub female connector for VGA
- One 10/100/1000Mbps Ethernet with Magnetic Isolation Protection & one 10/100Mbps Ethernet with Magnetic **Isolation Protection**
- Two USB 2.0 connectors
- One isolated DIO (4 IN/OUT) for (rBOX101-6COM)
- Two DC Powers Input with terminal block
- Alarm Contact
- Wireless (Optional by ODM order)

NOTE All specifications and images are subject to change without notice.

1.3 Dimensions

The following diagrams show you dimensions and outlines of the **rBOX101-6COM-FL and rRBOX101-4COM-FL**.

■ rBOX101-6COM-FL

Introduction

rRBOX101-4COM-FL

1.4 I/O Outlets

The following figures show you I/O outlets on front view and top view of the **rBOX101-6COM-FL and rBOX101-4COM**.

• Front View

rBOX101-6COM-FL

rBOX101-4COM

rBOX101-FL Series User's Manual

• Top View

rBOX101-6COM-FL

rBOX101-4COM

1.5 Packing List

The package bundled with your **rBOX101-FL** should contain the following items:

- rBOX101-FL System Unit x 1
- CD x 1 (For Driver and User's Manual)
- Power terminal block x1
- DIO female connector x1 (rBOX101-6COM)
- Din-rail kit x1
- Screws
- Quick Manual x1
CHAPTER 2 HARDWARE INSTALLATION

The **rBOX101-FL** is convenient for your various hardware configurations, such as Memory Module and CompactFlashTM card. The chapter 2 will show you how to install the hardware. It includes:

2.1 Installing the Memory Module

- **Step 1** Turn off the system.
- **Step 2** Loosen these screws, and remove the top cover from the system.

rBOX101-FL Series User's Manual

Step 3 Hold one side of the module, and insert the gold colored contact into the socket. Push the module down.

Step 4 The memory module is locked by two latches on the sides.

Step 5 Put the cover back to the system, and fasten screws tight close the chassis.

Installing the CompactFlash[™] Card 2.2

Turn off the system.

Step 1 Step 2 Loosen these screws, and remove the cover from the system.

rBOX101-FL Series User's Manual

Step 3 Locate the CompactFlash $^{\mbox{TM}}$ socket.

Step 4 Loosen these screws and remove the CompactFlashTM fixing bracket.

Step 5 Insert the CompactFlashTM card into the socket until it is firmly seated.

Step 6 Put the CompactFlashTM fixing bracket back to the system, and fasten screws tight close the CompactFlashTM fixing bracket .

Step 7 Put the cover back to the system, and fasten screws tight close the chassis.

2.3.1 Installing Din-rail Mounting

The **rBOX101-FL** provides Din-rail Mount that customers can install as below:

Step 1 Prepare DIN Mount assembling components (screws and bracket) ready.

Step 2 Assembly the bracket to the system, and fasten screws tight.

NOTE Please notice the Din-rail holes with Wall-mounting holes while assembly the bracket to system.

rBOX101-FL Series User's Manual

NOTE The Din-rail kit drawing is listed below:

2.3.2 Setting up rBOX by Din-rail mounting

The **rBOX101-FL** set up by Din-rail mounting as below:

Step 1 Fixing the rail firstly.

rBOX101-FL Series User's Manual

Step 2 Set up the rBOX101-FL on the rail by Din-rail mounting

rBOX101-FL Series User's Manual

2.4 Installing Wall Mounting (optional)

The **rBOX101-FL** provides Wall Mounting that customers can install as below:

Step 1 Prepare Wall Mount assembling components (screws and bracket) ready.

rBOX101-FL Series User's Manual

Step 2 Assembly the bracket to the system, and fasten screws tight.

NOTE Please notice the Din-rail holes with Wall-mounting holes while assembly the bracket to system.

rBOX101-FL Series User's Manual

CHAPTER 3 PHOENIX-AWARD BIOS UTILITY

The Phoenix-Award BIOS provides users with a built-in Setup program to modify basic system configuration. All configured parameters are stored in a flash-backed-up to save the Setup information whenever the power is turned off.

3.1 Entering Setup

There is one way to enter the Setup program. You may either turn ON the computer and press immediately.

3.2 Control Keys

Up arrow	Move to the previous item	
Down arrow	Move to the next item	
Left arrow	Move to the left side	
Right arrow	Move to the right side	
Esc key	Main Menu Quit and delete changes into CMOS Status Page Setup Menu and Option Page Setup Menu Exit current page and return to Main Menu	
PgUp/"+"key	Increase the numeric value or make changes	
PgDn/"–" key	Decrease the numeric value or make changes	
F6 key	Load the default CMOS value from BIOS default table, only for Option Page Setup Menu	
F7 key	Load the Setup default, only for Option Page Setup Menu	
F10 key	Save all the CMOS changes, only for Main Menu	

3.3 Getting Help

Main Menu The online description of the highlighted setup function is displayed at the bottom of the screen.

Status Page Setup Menu/Option Page Setup Menu Press <F1> to pop out a General Help Window that provides the description of using appropriate keys and possible selections for highlighted items. Press <Esc> to exit the Help Window.

1446	1	Nove
Enter	-	Select
+/-/PU/PB	1	Value
ESC	1	Belt
31	à.	General Heln
2	3	Iton Holn
85	6	Province Using
FG	-	Fail-Safe Refaulte
87	-	Antinized Refaults
70	2	New in Bing
210	-	Same
	8	JANA

3.4 The Main Menu

Once you enter the Award BIOS CMOS Setup Utility, the Main Menu appears on the screen. In the Main Menu, there are several Setup functions and a couple of Exit options for your selection. Use arrow keys to select the Setup Page you intend to configure then press <Enter> to accept or enter its sub-menu.

Phoenix - Award	810S CMOS Setup Utility
 Standard CHOS Features Advanced BIOS Features Advanced Chipset Features Integrated Peripherals Power Management Setup PnP/PCI Configurations 	 PC Health Status Load Optimized Defaults Set Supervisor Password Set User Password Save & Exit Setup Exit Hithout Saving
Esc : Quit F18 : Save & Exit Setup F6 : SAVE CHOS TO BIOS	↑↓++ : Select Item F? : LOAD CHOS FROM BIDS
Time, Bate,	Hard Disk Type

NOTE If your computer can not boot after making and saving system changes with Setup, the Award BIOS will reset your system to the CMOS default settings via its built-in override feature.

NOTE It is strongly recommended that you should avoid changing the chipset's defaults. Both Award and your system manufacturer have carefully set up these defaults that provide the best performance and reliability.

3.5 Standard CMOS Setup Menu

The Standard CMOS Setup Menu displays basic information about your system. Use arrow keys to highlight each item, and use <PgUp> or <PgDn> key to select the value you want in each item.

Date

The date format is <day> <month> <date> <year>.

Time

This item shows current time of your system with the format <hour> <minute> <second>. The time is calculated based on the 24-hour military-time clock. For example, 1 p.m. is 13:00:00.

<u>NOTE</u> If system is power failure, the date and time will come back to previous setup.

• IDE Primary Master/Primary Slave

These items identify the types of each IDE channel installed in the computer, so, IDE type is auto detection.

IDE HDD Auto-Detection	[Press Enter]	Iten Help
IDE Channel Ø Master Access Mode	[Auto] [Auto]	Henu Level 🔸
Capacity.		To auto-detect the HDD's size, head on this channel
Cylinder		core contines
Nead Precenn	8	
Landing Zone Sector	8 8	

• Video

Select the display adapter type for your system.

Halt On

This item determines whether the system will halt or not, if an error is detected while powering up.

No errors	The system booting will halt on any errors detected. (default)
All errors	Whenever BIOS detects a non-fatal error, the system will stop and you will be prompted.
All, But Keyboard	The system booting will not stop for a keyboard error; it will stop for other errors.

 Press <Esc> to return to the Main Menu page. USB Device Setting

3.6 Advanced BIOS Features

This section allows you to configure and improve your system, to set up some system features according to your preference.

<u>NOTE</u> The BIOS default setting of the system is "Previous Setup". It means that if the system is power failure or power loss,

the system will come back to previous setup while be re-boot.

If you want to change the BIOS setting, please set up from "Advanced BIOS Features" (Please refer below graphic.)

Then, to select "**BIOS Optimized**" or "**Previous Setup**" under "Optimized Default Select". (Please refer below graphic.)

Further to save the selection (System will execute about 15 seconds)

Finally, please **shut down** the system, then **re-boot** it, the system will come back to your changed Optimized Default Select.

• CPU Features

Scroll to this item and press <Enter> to view the CPU Feature sub menu.

Limit CPUID MaxVal [Disabled] C1E Function [Auto]	Item Help
Execute Disable Bit [Enabled] Virtualization Technology (Disabled]	Henu Level → Set Linit CPUID MaxV to 3,Should Be "Disabled" for HinXp

• Harddisk boot priority

Scroll to this item and press <Enter> to view the sub menu to decide the disk boot priority

Quick Power On Self Test

This option speeds up Power on Self Test (POST) after you turn on the system power. If set as Enabled, BIOS will shorten or skip some check items during POST. The default setting is "Enabled".

Enabled	Enable Quick POST
Disabled	Normal POST

First/Second/Third Boot Device

These items let you select the 1st, 2nd, and 3rd devices that the system will search for during its boot-up sequence. There is a wide range of options for your selection.

Boot Other Device

This item allows the user to enable/disable the boot device not listed on the First/Second/Third boot devices option above. The default setting is "Enabled".

Boot Up NumLock Status

Set the the Num Lock status when the system is powered on. The default value is "On".

Security Option

This item allows you to limit access to the system and Setup, or iust to Setup. The default value is "Setup".

- **System** System requires correct password before booting, and also before permitting access to the Setup page.
- Setup System will boot, but requires correct password before permitting access to Setup. (Default value)

3.7 Advanced Chipset Features

This section contains completely optimized chipset's features on the board that you are strongly recommended to leave all items on this page at their default values unless you are very familiar with the technical specifications of your system hardware.

• DRAM Timing Selectable

Use this item to increase the timing of the memory. This is related to the cooling of memory.

• System BIOS Cacheable

Selecting Enabled allows caching of the system BIOS ROM at F0000h-FFFFFh, resulting in better system performance. However, if any program writes to this memory area, a system error may result. The default value is "Disabled".

• Video BIOS Cacheable

This item allows you to change the Video BIOS location from ROM to RAM. Video Shadow will increase the video speed.

*** VGA Setting ***

 On-Chip Frame Buffer Size

Use this item to set the VGA frame buffer size.

• Onboard Lan Boot ROM

Use this item to enable or disable the Boot ROM function of the onboard LAN chip when the system boots up. Its default is *disable*.

3.9 Power Management Setup

The Power Management Setup allows you to save energy of your system effectively. It will shut down the hard disk and turn OFF video display after a period of inactivity.

ACPI Function

Advanced Configuration and Power Management (ACPI).

The function is always "Enabled".

3.10 PnP/PCI Configuration Setup

This section describes the configuration of PCI (Personal Computer Interconnect) bus system, which allows I/O devices to operate at speeds close to the CPU speed while communicating with other important components. This section covers very technical items that only experienced users could change default settings.

• Reset Configuration Data

Normally, you leave this item Disabled. Select Enabled to reset Extended System Configuration Data (ESCD) when you exit Setup or if installing a new add-on cause the system reconfiguration a serious conflict that the operating system can not boot. Options: Enabled, Disabled.

• Resources Controlled By

The Award Plug and Play BIOS can automatically configure all boot and Plug and Play-compatible devices. If you select Auto, all interrupt request (IRQ), DMA assignment and Used DMA fields disappear as the BIOS automatically assign them. The default value is *"Auto"*. The other option is *"Manual"*

Check of the second of the sec	rion nery
Resources Controlled By [Auto(ESCD)] FRO Resources PCI/VGA Palette Snoop [Disabled] ** PC1 Express relative fiens ** Maxinum Payload Size [128]	Henu Level → BIOS can autonatically configure all the boot and Plug and Play compatible devices. If you choose Auto, you cannot select IRQ DMA and memory base address fields, since BIOS autonatically assigns them

rBOX101-FL Series User's Manual

• IRQ Resources

When resources are controlled manually, assign each system interrupt to one of the following types in accordance with the type of devices using the interrupt:

- 1. Legacy ISA Devices compliant with the original PC AT bus specification, requiring a specific interrupt (such as IRQ4 for serial port 1).
- 2 . PCI/ISA PnP Devices compliant with the Plug and Play standard,

whether designed for PCI or ISA bus architecture. The default value is *"PCI/ISA PnP"*.

PCI/VGA Palette Snoop

Some non-standard VGA display cards may not show colors properly. This item allows you to set whether MPEG ISA/VESA VGA Cards can work with PCI/VGA or not. When enabled, a PCI/VGA can work with a MPEG ISA/VESA VGA card; when disabled, a PCI/VGA cannot work with a MPEG ISA/VESA Card.

** PCI Express relative items

Maximum Payload Size

When using DDR SDRAM and Buffer size selection, another consideration in designing a payload memory is the size of the buffer for data storage. Maximum Payload Size defines the maximum TLP (Transaction Layer Packet) data payload size for the device.

Press <Esc> to return to the Main Menu page.

Reset Configuration Bata	[Disabled]	Iten Help

Press <Esc> to return to the Main Menu page.

3.12 Load Optimized Defaults

This option allows you to load your system configuration with default values. These default settings are optimized to enable high performance features.

To load CMOS SRAM with SETUP default values, please enter "Y". If not, please enter "N".

3.13 Set Supervisor/User Password

You can set a supervisor or user password, or both of them. The differences between them are:

- 1 **Supervisor password:** You can enter and change the options on the setup menu.
- 2 **User password:** You can just enter, but have no right to change the options on the setup menu.

When you select this function, the following message will appear at the center of the screen to assist you in creating a password.

ENTER PASSWORD

Type a maximum eight-character password, and press <Enter>. This typed password will clear previously entered password from the CMOS memory. You will be asked to confirm this password. Type this password again and press <Enter>. You may also press <Esc> to abort this selection and not enter a password.

To disable the password, just press <Enter> when you are prompted to enter a password. A message will confirm the password is getting disabled. Once the password is disabled, the system will boot and you can enter Setup freely.

PASSWORD DISABLED

When a password is enabled, you have to type it every time you enter the Setup. It prevents any unauthorized persons from changing your system configuration.

Additionally, when a password is enabled, you can also require the BIOS to request a password every time the system reboots. This would prevent unauthorized use of your computer.

You decide when the password is required for the BIOS Features Setup Menu and its Security option. If the Security option is set to "System", the password is required during booting up and entry into the Setup; if it is set as "Setup", a prompt will only appear before entering the Setup.

Introduction

rBOX101-FL Series User's Manual

3.14 Save & Exit Setup

This section allows you to determine whether or not to accept your modifications. Type "Y" to quit the setup utility and save all changes into the CMOS memory. Type "N" to bring you back to the *Previous Setup utility.*

3.15 Exit Without Saving

Select this option to exit the Setup utility without saving changes you have made in this session. Type "Y", and it will quit the Setup utility without saving your modifications and come back to *Previous Setup utility*. Type "N" to return to the *Setup utility*.
